

# **FUTR Presentation**

**January, 2018**

F U T R  
F U T E R E U M

## Q: What is FUTR?

- A utility token that exists in ERC-20 format on the Ethereum Blockchain
- The world's first Ether-based futures contract
- The world's first derivatives contract to be put on the Blockchain
- A tradeable asset that can be bought and sold on exchange
- An easily mineable token that is minted simply when you send ETH to a smart contract address

FUTR  
FUTERUM

## Why Choose FUTR As A Crypto Investment?

1. The Futereum Foundation will launch 2 new products similar to FUTR over the next 12 months. Only the addresses that mint new FUTR by sending ETH to the smart contract address on the Futereum website will be eligible to participate in pre-ICO events for those tokens
2. FUTR rises and falls more than ETH since it is a derivative of ETH. Therefore, for traders who want more exposure to the ETH price (i.e. traders who want to capture more gains when ETH rises in price) FUTR is an obvious investment choice
3. FUTR swaps at the end of 12-36 months (depending when all FUTR is issued) for a share of over 500,000 ETH, giving it permanent loaded value

## **FUTR As A Derivative (1)**

### **How Does FUTR Work?**

A miner sends ETH to the smart contract address:

**0xc83355eF25A104938275B46cffD94bF9917D0691**

The miner will receive back between 2-114 FUTR in return for 1 ETH (or a fraction thereof) depending on the mining level at the point of sending (mining levels get harder as more FUTR are mined). At the end of 13-37 months, depending on when the levels are mined, FUTR swaps back at a ratio 1% per FUTR-1% per ETH.

## FUTR As A Derivative (2)

Because of the way in which FUTR is distributed, FUTR functions like a futures contract with a performance advantage awarded to early-stage miners and those who mined FUTR when ETH was cheaper in value:

Level	FUTR	FUTR/ETH	ETH
1	1,000,000	114	8,772
2	990,000	89	11,124
3	960,000	55	17,455
4	910,000	34	26,765
5	720,000	21	34,286
6	650,000	13	50,000
7	560,000	8	70,000
8	450,000	5	90,000
9	320,000	3	106,667
10	170,000	2	85,000
<b>Total</b>	<b>6,730,000</b>	<b>-</b>	<b>500,067</b>

## FUTR As A Derivative (3)

Once all 6,730,000 FUTR are sold for a total of 423,556.749 ETH (500,056 – 15.3% fees), the FUTR and the ETH are swapped back with each other after either 13 months or after 37 months (depending on the time period in which all FUTR are sold).

The exchange of FUTR with ETH on a like-for-like basis results in every FUTR holder getting the same amount of ETH regardless of the Level or the time period in which they mined FUTR.

**For every 15.88925218613386 FUTR, 1 ETH is received via the smart contract in the swap back.** For a Level 1 player for example, this results in an increase of 8.87 ETH per 1 ETH originally submitted to the smart contract.

## Possible Uses For FUTR

- **As a currency for ICOs to accept:** because FUTR offers both a utility token with tradeable value and an option to switch to ETH after a predetermined time period, FUTR makes for a much more diversified crypto to accept when managing a project with milestones over a timeline
- **As a derivative to amplify Ether gains**
- **As a derivative to hedge against losses in any Ether sell-off**
- **As a utility token to trade on exchange:** because later-level mining becomes much less affordable, accumulating supply in this period can lead to having an edge in the next mining cycle

## FUTR Dollar

FUTR dollar, or F\$, is used to measure the premium/discount:

$$F\$ = (\text{USD/ETH}) * ([\text{TOTAL FUTR} / \text{TOTAL ETH}] / [\text{FUTR/ETH}])$$

$$F\$ = (\$1004) * ([6.73\text{m} / 423,558 \text{ ETH}] / [8115/61.11])$$

$$F\$ = (\$1004) * (15.89 / 132.79) = \$120.14$$

In the present example, we can compare the current price at which FUTR is mined (\$8.80 / FUTR) with the current F\$ rate and say it is mining at a 92.7% discount to FUTR dollar parity.

## Summary

- FUTR is the most value-loaded crypto in the world
- FUTR has multiple use-case possibilities, including as a tradeable asset in its own right, as a derivative and as an ICO payment currency supported by the Ethereum network
- For every 15.89 FUTR held, investors receive back 1 ETH at the point of the swap; it is currently at a 93% discount to F\$
- Investors can purchase FUTR after February 2018 on exchange, or anyone can buy it now by sending any amount of ETH to the smart contract address in the presentation
- FUTR is the world's first genuine value-enhancement of the Blockchain – for this reason, it is likely to do very well!
