

Introducing Futereum X (FUTX)

It's FUTR To The Power of X

February, 2018

FUTR
FUTEREUM

Q: What is FUTX?

- A utility token that exists in ERC-20 format on the Ethereum Blockchain with exponential price curve due to “final-level rollover(s)”
- The world’s second Ether-based futures contract (called a Futer-)
- The world’s second Futer on Blockchain
- It’s FUTR to the power of x – time-enhanced FUTR
- A token that is minted when you send ETH to a smart contract address

FUTR
FUTERUM

Why Choose FUTX As A Crypto Investment?

1. For those who already own FUTR, FUTX is a no-brainer – it's a rapid-cycle, miniaturised version of FUTR that will trade on exchange at Futereum against major crypto currency pairs and on other exchanges
2. As for FUTR, FUTX safely stores your ETH in a smart contract address that is inaccessible to anyone but you until the point when it becomes eligible to swap back for Ether
3. FUTX swaps between 4-12 months (depending when all FUTX is issued) for a share of over 5,000 ETH, giving it permanent loaded value
4. FUTX is the last pure Ether derivatives contract Futereum will issue

How Does FUTX Work?

A miner sends ETH to the smart contract address:

0x8b7d07b6ffB9364e97B89cEA8b84F94249bE459F

The miner will receive back between 2-114 FUTR in return for 1 ETH (or a fraction thereof) depending on the mining level at the point of sending (mining levels get harder as more FUTR are mined). At the end of 3 months, if all levels are mined, FUTX swaps back for ETH. If all levels not yet mined, the swap will happen end of month 12.

Less Value Mining Than FUTR

FUTX is designed to complete value mining cycles in a fraction of the time as FUTR, with much less Ether required. *It's FUTR on fast forward!*

Level	FUTR	FUTR/ETH	ETH
1	10,000	114	87.72
2	9,900	89	111.24
3	9,600	55	174.55
4	9,100	34	267.65
5	7,200	21	342.86
6	6,500	13	500.00
7	5,600	8	700.00
8	4,600	5	920.00
9	3,200	3	1,066.67
10	1,700	2	850.00
Total	67,400	-	5,020.67

The Advantages of FUTX

- FUTX is much quicker and less cost-intensive to value mine than FUTR
- Holding for the long term could see significant price performance as early levels will be very hard to get in on again
- Alongside FUTR as an exchange pair traded against Top 25-50 cryptos, FUTX offers an alternative form of arbitrage whenever FUTR pairs are becoming over-utilised, keeping the value on Futorex constant
- Allows for value comparison versus FUTR: as value miners push towards the final levels of FUTX, just as FUTR is becoming more cost-intensive to obtain from the smart contract it will seem comparatively cheap at frequent intervals as a result of FUTX faster value mining schedule

FUTX: There is no time like the Futer!
